We are Breakthrough T1D

Founded in 1970 by families determined to drive cures for their loved ones living with type 1 diabetes (T1D), we are the leading global T1D research and advocacy organization.

About T1D

T1D is an autoimmune disease in which the body attacks the insulin-producing cells in the pancreas. It is diagnosed in people of all ages around the world. People with T1D depend on insulin therapy to survive. There is no way to prevent it, and there are no cures. Breakthrough T1D is working to change that.

We are the leading global *type 1 diabetes* research and advocacy organization.

Research

Breakthrough T1D is executing an ambitious plan toward cures, created by leading scientists and our global board of directors, most of whom have a direct T1D connection.

Our research has two core objectives:

- Cure T1D by restoring the body's ability to make insulin and stopping T1D before it occurs or providing insulin independence through replacement with insulin-producing cells
- Improve lives by keeping people with T1D as healthy as possible until cures are found by advancing new T1D resources, technologies, and therapies.

Breakthrough T1D has had a hand in the development of nearly every T1D advancement over the past 50 years. We will continue to fund the best research until this disease is a thing of the past.

Advocacy

Breakthrough T1D advocacy is critical to advancing breakthroughs for the entire T1D community. With the support of our grassroots advocates, our work helps advance treatments, influence policy, and improve access to care for those all over the world who need it.

$3.6 billion secured in Federal funding through the Special Diabetes Program (SDP)

500+ Congressional meetings held annually by grassroots advocates and staff

Join us to drive out T1D.

Your company will be seen as a leader in your community, making a significant and direct impact in the lives of those living with T1D.

Breakthrough T1D-funded research encompasses T1D at every life stage: stopping its progression in people who are newly diagnosed; reversing it in those who have lived with the disease for years; avoiding or reversing complications; and preventing the disease in people at risk.

The time is now to work together, so we can deliver better treatments to ease the daily burden of the disease until there is a cure. We cannot do it alone.
